

MOHAMED ELSAYED ELSAYED MOHAMED

Full Stack Developer — React / Angular & .NET

+20 100 435 4231 | Egypt | mohamed.elsayed103@gmail.com | [linkedin.com/in/mohamed-elsayed1](https://www.linkedin.com/in/mohamed-elsayed1) | github.com/MohamedElsayed1 | portfolio-flax-three-18.vercel.app

SUMMARY

Full Stack Developer experienced in building complete, production-ready web applications independently — from database and API design through to responsive, component-driven frontends. Proficient across React, Angular, and ASP.NET Core, with hands-on experience in Clean Architecture, CQRS, secure multi-role authentication (JWT, OAuth, 2FA), and relational database design in PostgreSQL and SQL Server. Shipped three full-scale solo projects spanning a multi-tenant SaaS platform, a telemedicine system, and an e-commerce application.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript, SQL, HTML/CSS
- **Frontend:** React, Angular, TanStack (Router/Start/Query), RxJS, Context API, Tailwind CSS, shadcn/ui, Radix UI, React Hook Form, Zod
- **Backend:** ASP.NET Core, .NET, RESTful API design, CQRS with MediatR, Clean Architecture, Entity Framework Core, FluentValidation, AutoMapper
- **Databases:** PostgreSQL, SQL Server, relational schema design
- **Auth & Security:** JWT (access & refresh tokens), OAuth 2.0 (Google), TOTP two-factor authentication, BCrypt password hashing, role-based authorization
- **Tools & Platforms:** Git/GitHub, Docker, Cloudinary, Vercel, Railway, Cloudflare, Serilog, Swagger/OpenAPI, Postman
- **Testing:** Vitest, Jasmine/Karma

PROJECT EXPERIENCE

HireFlow — Multi-Tenant Recruitment & Applicant Tracking SaaS Platform (2026 – 2027)

Angular 21 (multi-app monorepo) · ASP.NET Core · PostgreSQL · MediatR/CQRS · Docker

- Architected a full-stack, multi-tenant ATS platform end-to-end, structuring the backend around Clean Architecture (Domain, Application, Infrastructure, API layers) and CQRS with MediatR across 151 handlers spanning 10 feature modules and 67 REST API endpoints, with custom pipeline behaviors for centralized validation, logging, and transactional persistence.
- Implemented secure authentication for 3 user roles (Admin, Company, Candidate), combining JWT refresh-token rotation, Google OAuth, and TOTP-based two-factor login with QR code provisioning.
- Delivered core recruiting workflows including configurable hiring pipeline stages, interview scheduling, candidate evaluations, tiered subscription plans, and analytics dashboards (hiring funnel, KPIs, source breakdown) on PostgreSQL/EF Core, with audit logging for traceability.
- Developed the frontend as an Angular monorepo with 3 independently buildable applications (Admin, Company, Candidate portals) sharing common core, UI, and shared component libraries, with interactive charts via ngx-charts and Chart.js.
- Containerized the API with Docker and integrated Serilog structured logging and Swagger/OpenAPI documentation to streamline deployment, debugging, and API discoverability.

ClinIQ — Telemedicine & Clinic Appointment Booking Platform (2026 – 2027)

React 19 (TanStack Start/Router) · ASP.NET Core · PostgreSQL · Cloudinary

- Launched a bilingual (Arabic/English) telemedicine platform spanning 3 dedicated portals (patient, doctor, admin), supporting real-time video consultations and appointment booking.
- Engineered server-side appointment-booking logic with conflict detection to prevent double-booked time slots, backing 33 REST API endpoints across 8 controllers secured with JWT authentication, token refresh, and Google sign-in.
- Assembled medical record management, in-app notifications, a review system, and an admin dashboard providing revenue and usage analytics across 10 core domain models; internationalized the full UI with i18next.
- Integrated Cloudinary for profile and document image uploads and applied FluentValidation for consistent request-level input validation across the API.

Smart Vibe — Full-Stack E-Commerce Platform (2025 – 2026)

React 18 · ASP.NET Core · PostgreSQL · Docker · Deployed on Vercel & Railway

- Designed, delivered, and deployed a complete e-commerce platform covering product catalog, shopping cart, checkout, and order management across 52 REST API endpoints, with the API containerized via Docker and deployed on Railway and the frontend on Vercel.
- Modeled a relational schema spanning products, orders, reviews, coupons, and site content (blog, FAQs, careers), including a review-approval workflow and a configurable coupon/discount engine, with JWT authentication and BCrypt password hashing.
- Developed a type-safe React/TypeScript frontend using TanStack Query for server-state management, React Hook Form with Zod schema validation, and shadcn/ui with Tailwind CSS for a component-driven UI.
- Built a secure password-reset flow with token-based verification and supporting 4 content management modules (blog, FAQs, careers, site settings) for ongoing platform administration.

LANGUAGES

Arabic — Native

English — Intermediate

EDUCATION

Bachelor's Degree
